

# Shifting Systems in the Climate Decade

Climate Group's COP26 Roundtable Series

Thursday, 4 November – Tuesday, 9 November 2021

 **CLIMATE GROUP**

# Shifting systems in the Climate Decade

Climate Group's COP26 roundtable series

## Overview

As COP26 approaches, the world is living with the impacts of climate change. Our climate and environmental boundaries are being tested and our systems are changing faster than we expected.

With world leaders set for critical climate negotiations in Glasgow, Climate Group presents the Shifting systems roundtable series designed to unite and connect leaders in policy, business, finance, and advocacy to share, support and shift systems and realise net zero futures. Each roundtable brings together critical stakeholders from across Climate Group's networks to co-create a series of recommendations for short term action that will start to shift critical elements within key emitting systems, towards a net zero future.

Systems change for a net zero future requires radical collaboration which is only possible if these stakeholders work together and utilise their influence in specific areas. This series asks participants to share best practice, lessons learnt, and the challenges they face to support the development of key recommendations for short term action that can shift key systems towards a net zero future.

## Aims:

- **Share** cross sector and cross industry learnings to support systems shifts.
- **Support** the development of key action areas to shift systems in the short and long term.
- **Shift** critical elements and understand the levers that can result in shifting systems.

## Objectives:

- **Prioritise:** Understand what must be prioritised to create systems change for the short, medium and longer term from different perspectives.
- **Prepare:** Learn from different stakeholders on how to prepare your organisation to have an impact and what you can do to contribute to shifting systems.
- **Pathways:** Develop a set of recommendations for business, governments, NGOs, and financiers to take real short-term actions and help shift the system being discussed.

Schedule:

Thursday 4th November

Monday 8th November

Tuesday 9th November

07:00

08:00

09:00

10:00

11:00

12:00

13:00

14:00

15:00

16:00

17:00

Shifting systems roundtable

Asia energy: Funding the phase out of coal

Shifting systems roundtable

Justice: Embedding environmental and social justice

Shifting systems roundtable

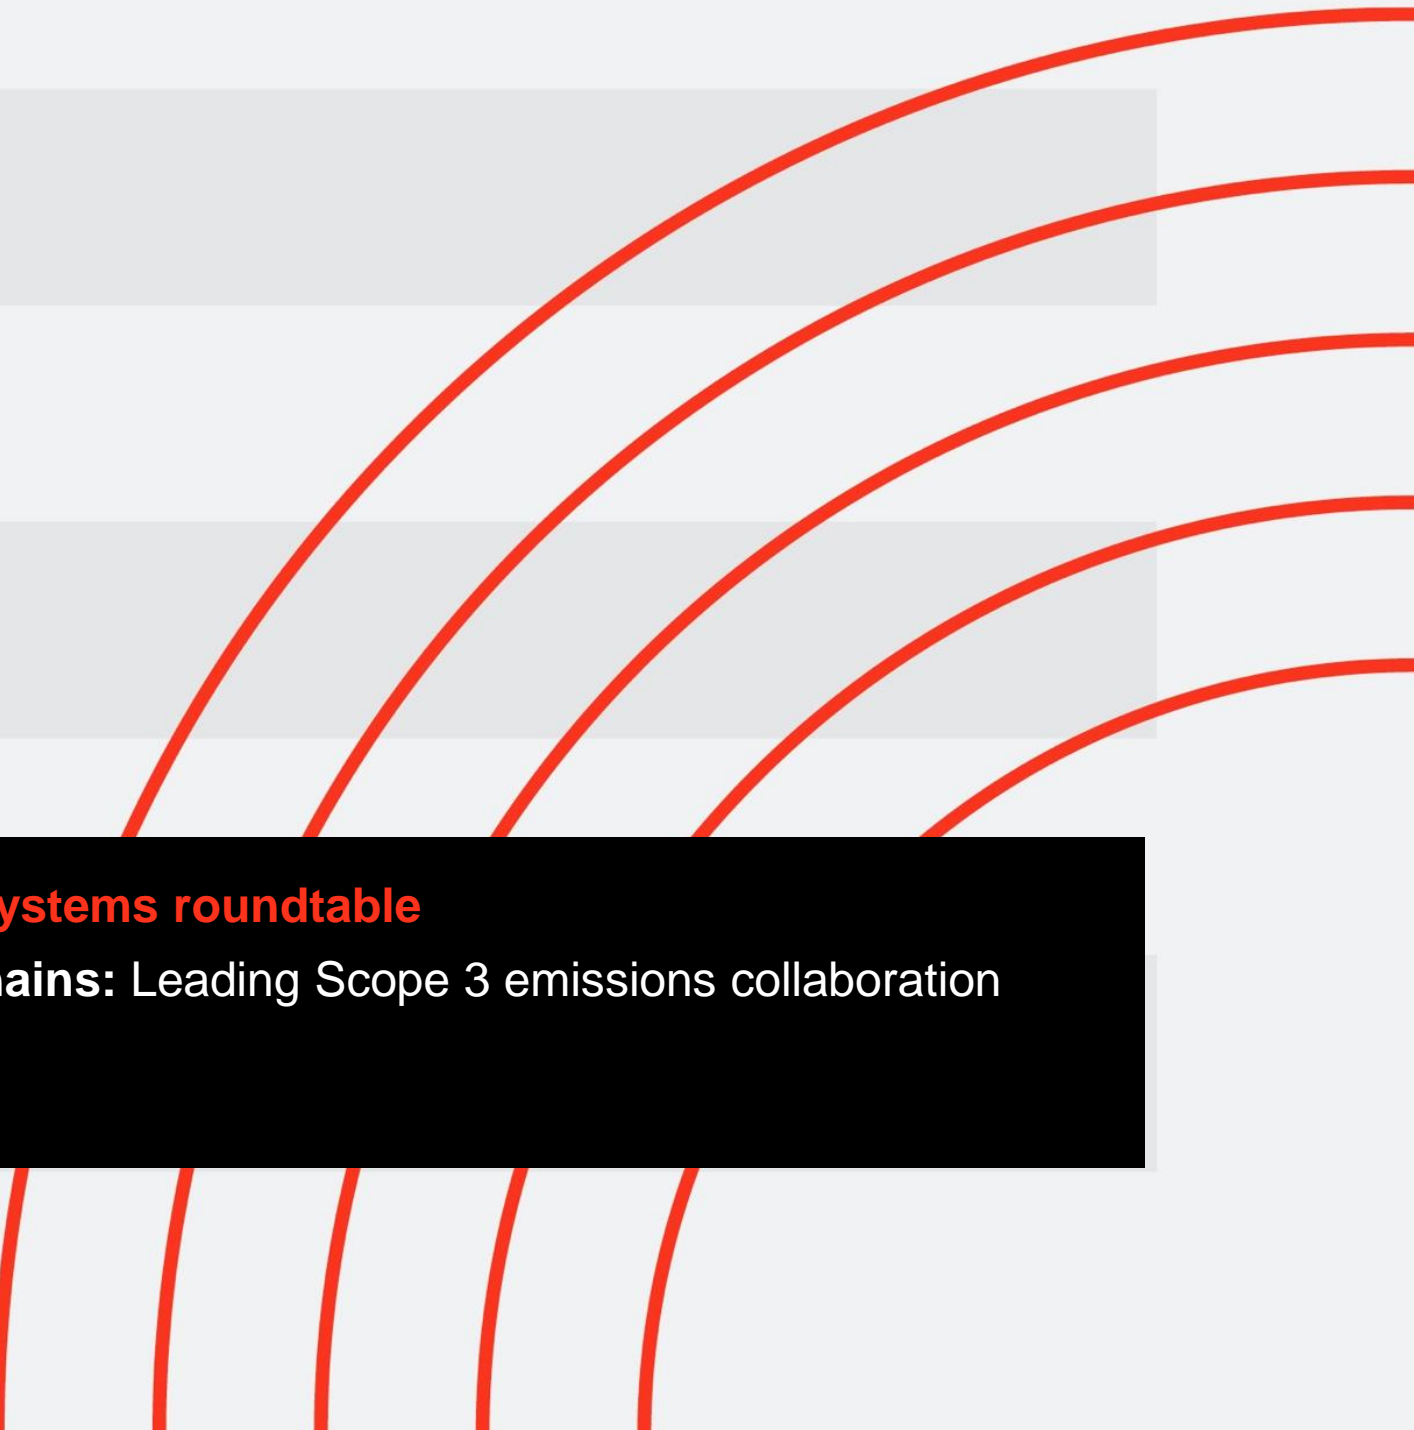

Industry: A net zero materials revolution

Shifting systems roundtable

Finance: Banking on systems change

Shifting systems roundtable

Supply chains: Leading Scope 3 emissions collaboration

# Shifting systems – finance:

## *Banking on systems change*

### Overview:

The banking industry is in a unique position to influence and support the transition to a low-carbon economy. So how can banks best fulfil this potential and effectively mobilize capital to enable a smooth transition to a low-carbon economy?

This roundtable brings together leading global banks to share the successes and challenges they have faced since the Paris Agreement and discuss the role they need to play in the next decades. We will explore the path to net zero and how banks can work together to consistently leverage disclosures, measure financed emissions and finance the systems shifts we need across different sectors.

### Aims:

- Leveraging disclosures and transition plans
- Developing and delivering against net zero targets
- Mobilising solutions

### Outcomes:

- Develop a set of key action areas for banks to take short- and long-term action in key emitting industries.

### Location:

#### Date:

Thursday, 4 November

#### Time:

12:30pm – 2:00pm GMT

#### Arrive by:

12:15pm (15 minutes before)

#### Venue:

Equator

Roundtable

In Person

### Hosted by:

**Helen Clarkson**  
CEO  
Climate Group

**John T. Colas**  
Partner and Vice-Chairman,  
Financial Services Americas  
Oliver Wyman
